Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 January 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statements (IDS) submitted on 3/5/2002 and 6/2/2003 have been considered and placed in the application.

Election/Restrictions

2. Applicant's election with traverse of Group I, Species I in Paper No. 5 is acknowledged. The traversal is found persuasive. After careful reconsideration of this application, the Election/Restriction of the previous office action is withdrawn. Now all claims are considered.

Specification

3. The abstract of the disclosure is objected to because it is too long and contains phrases which can be implied, for example "The invention is.." . Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-4, 7-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fitz (6,306,163). Fitz discloses an apparatus and method for delivering a self-

expanding stent and filter into a body lumen wherein the apparatus includes all the limitation of the claims (cols. 3-5) except for a presence of an outer tube. Although, Fitz fails to disclose an outer tube, it is known in the art to include an introducer or an outer tube for advancing a intravascular delivering apparatus into a body lumen to a treated site in order to prevent the intravascular delivery apparatus from accidental deploying an implant at an undesired site as well as to prevent an intravascular delivery apparatus from damaging a vessel wall during being navigated into a treated site. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ an outer tube into the Fitz's apparatus in order to prevent the apparatus from accidental deploying an implant at an undesired site as well as to prevent an intravascular delivery apparatus from damaging a vessel wall during being navigated into a treated site. Doing so would provide an apparatus carrying out all the steps as claimed.

Allowable Subject Matter

6. Claims 4-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to disclose or suggest a carriage being adapted to engage an outer tube so as to resist distal movement of the capturing element relative to the outer tube.
